

Abdelkoddouss El Fadili

Computer Engineering Student | Full-stack, ML/DL and Agentic AI

Morocco | abdelkoddoussselfadili@gmail.com | +212 608 568 400 | github.com/abdoelfadili | linkedin.com/in/abdelkoddouss-elfadili

Profile

Computer engineering student focused on full-stack development, mobile applications, Machine Learning, Deep Learning and Agentic AI. I build useful software with robust APIs, clean interfaces, well-structured databases and strong attention to maintainability, security and product value.

Core Skills

Languages	Java, Python, C, C++, C#, Dart, PL/SQL
Web / Backend	React.js, Laravel, Spring Boot, ASP.NET, HTML, CSS, JavaScript, REST API architecture
Mobile	Flutter, API integration, local storage, mobile workflows
Data	MySQL, Oracle, SQLite, data modeling, queries, relational schemas
AI	Machine Learning, Deep Learning, Agentic AI, evaluation, automation, assistants, recommendations
Tools / Methods	Git, Docker, VS Code, Postman, Figma, UML, Merise, Agile/SCRUM, application security

Professional Experience

Final-year internship – Mobile Development April – May 2023
[SPS Technologie](#)

- Developed a Flutter mobile application connected to a Laravel API for order and delivery management.
- Integrated APIs, handled real-time data flows and implemented dynamic filters.
- Contributed to clearer mobile workflows for operational tracking.

Observation internship – IT Maintenance and Web July 2023
[Abattoirs de Casablanca](#)

- Performed computer maintenance, workstation setup and user support.
- Worked on hardware diagnostics, network configuration and static website creation.

Selected Projects

School Management Platform 2022 – 2024
[Laravel](#), [React](#), [MySQL](#)

- Complete web application to centralize users, courses, classes, grades and schedules.
- Role-based management for administrators, teachers and students with structured CRUD modules.
- Impact: clearer administrative workflow and better data traceability.

Volunteer Platform API 2023 – 2024
[Laravel](#), [Docker](#), [MySQL](#), [GitHub](#)

- REST API to manage missions, volunteers, organizations and association workflows.
- Authentication, business endpoints and reproducible Docker environment.
- Impact: backend ready to connect with a web or mobile client.

Library Management System 2023 – 2024
[Laravel](#), [Docker](#), [GitHub](#)

- Structured backend for catalog, users, loans and returns.
- Reduced manual tracking errors and prepared the architecture for a modern interface.

Java File Encryption Application 2022 – 2024
[Java](#), [JavaFX](#), [RSA](#)

- Desktop application to encrypt and decrypt files using RSA.
- Simple interface with key generation and local file management.

- Mobile application with local storage and intelligent weekly meal plan suggestions.
- Demonstrates applied AI for an everyday need with product logic and user preferences.

Education

Engineering Cycle in Computer Science2024 – Present
ENIAD – Mohammed Premier University
Advanced training in software development, architecture, systems, databases and emerging technologies.

DUT in Computer Science2022 – 2024
EST Guelmim
Strong foundations in programming, software design, databases and applied projects.

Strengths

Full-stack

REST APIs

Flutter

Databases

Machine Learning

Deep Learning

Agentic AI

Docker
